## Balancing Equations and Simple Stoichiometry

Balance the following equations:

1) $\qquad$ $\mathrm{N}_{2}+\ldots \mathrm{F}_{2} \rightarrow$ $\qquad$ $\mathrm{NF}_{3}$
2) $\qquad$ $\mathrm{C}_{6} \mathrm{H}_{10}+$ $\qquad$ $\mathrm{O}_{2} \rightarrow$ $\qquad$ $\mathrm{CO}_{2}+$ $\qquad$ $\mathrm{H}_{2} \mathrm{O}$
3) $\qquad$ $\mathrm{HBr}+$ $\qquad$ $\mathrm{KHCO}_{3} \rightarrow$ $\qquad$ $\mathrm{H}_{2} \mathrm{O}+$ $\qquad$ $\mathrm{KBr}+$ $\qquad$ $\mathrm{CO}_{2}$
4) $\qquad$ $\mathrm{Na}_{2} \mathrm{SO}_{3} \rightarrow$ $\qquad$ $\mathrm{Ga}_{2}\left(\mathrm{SO}_{3}\right)_{3}+$ $\qquad$ NaBr
5) $\qquad$ $\mathrm{SnO}+$ $\qquad$ $\mathrm{NF}_{3} \rightarrow$ $\qquad$ $\mathrm{SnF}_{2}+$ $\qquad$ $\mathrm{N}_{2} \mathrm{O}_{3}$

Using the equation from problem 2 above, answer the following questions:
6) If I do this reaction with 35 grams of $\mathrm{C}_{6} \mathrm{H}_{10}$ and 45 grams of oxygen, how many grams of carbon dioxide will be formed?
7) What is the limiting reagent for problem 6 ? $\qquad$
8) How much of the excess reagent is left over after the reaction from problem 6 is finished?
9) If 35 grams of carbon dioxide are actually formed from the reaction in problem 6, what is the percent yield of this reaction?

## Balancing Equations and Simple Stoichiometry

Balance the following equations:

1) $1 \mathrm{~N}_{2}+3 \mathrm{~F}_{2}=2 \mathrm{NF}_{3}$
2) $2 \mathrm{C}_{6} \mathrm{H}_{10}+17 \mathrm{O}_{2}=12 \mathrm{CO}_{2}+10 \mathrm{H}_{2} \mathrm{O}$
3) $1 \mathrm{HBr}+1 \mathrm{KHCO}_{3} \approx 1 \mathrm{H}_{2} \mathrm{O}+1 \mathrm{KBr}+1 \mathrm{CO}_{2}$
4) $2 \mathrm{GaBr}_{3}+3 \mathrm{Na}_{2} \mathrm{SO}_{3}=1 \mathrm{Ga}_{2}\left(\mathrm{SO}_{3}\right)_{3}+6 \mathrm{NaBr}$
5) $3 \mathrm{SnO}+2 \mathrm{NF}_{3}>3 \mathrm{SnF}_{2}+1 \mathrm{~N}_{2} \mathrm{O}_{3}$

Using the equation from problem 2 above, answer the following questions:
6) If I do this reaction with 35 grams of $\mathrm{C}_{6} \mathrm{H}_{10}$ and 45 grams of oxygen, how many grams of carbon dioxide will be formed?
When you do this calculation for 35 grams of $\mathrm{C}_{6} \mathrm{H}_{10}$, you find that 113 grams of $\mathrm{CO}_{2}$ will be formed. When you do the calculation for 45 grams of oxygen, you find that 43.7 grams of $\mathrm{CO}_{2}$ will be formed. Because 43.7 grams is the smaller number, oxygen is the limiting reagent, forming 43.7 grams of product.
7) What is the limiting reagent for problem 6 ? oxygen
8) How much of the excess reagent is left over after the reaction from problem 6 is finished?
21.5 grams of $\mathrm{C}_{6} \mathrm{H}_{10}$ will be left over.
9) If 35 grams of carbon dioxide are actually formed from the reaction in problem 6, what is the percent yield of this reaction?
80.1\%
